MASS MEDIA

To live in the modern world is impossible without expanding your knowledge in all spheres. There are several ways of communicating the world of individuals-mass media, books, travelling, museums, meeting eminent people. Of all the existing ways, there are two which are the easiest, those are mass media and travelling. It's not a secret the different media are used to communicate news and entertainment. They include print media and electronic media.

Mass media play an important role in our life. They are usually defined by encyclopedias as any of the means of communication, such as radio, television, newspapers, magazines, etc. that reach and influence a very large audience, at least as large as the whole population of a nation.

I believe mass media are so influential because they can be used for various purposes: popularization, education, entertainment etc.

Mass media play a crucial role in forming public opinion. But how much do the media influence the modern society? Early critiques suggested that the media destroys the individual's capacity to act autonomously. Later studies, however, suggest a more complex interaction between the media and society. People actively interpret and evaluate the media and the information it provides.

1. Fill in the blanks. The first letter of each missing word has been given:

The mass media refers to the people and organizations that provide news and i.....(1) for the public. Until recently these were mainly n.....(2), t.....(3), and r.....(4). Today, computers play a very big part. The I.....(5) is a computer system that allows millions of people around the world to receive and exchange information about almost everything. Ordinary post has been taken over by e.....(6) which stands for e.....(7) mail because it is sent m.....(8) to each other quickly and cheaply. Ordinary p.....(9) is now referred to as "snail-mail" and one wonders if the p.....(10) is a job in danger of extinction!

2. Translate into English:

1. Средства массовой информации-это средства коммуникации, такие как радио, телевидение, газеты, журналы, которые создают очень большую аудиторию.
2. Средства массовой информации играют ведущую роль в формировании общественного мнения.
3. Они доносят до людей информацию о мире.
4. Они также воспроизводят созданный современным обществом его собственный имидж.
5. Они создают аудиторию, которая поддерживает их в финансовом отношении.

3. Написать сообщение по теме MassMedia.(50-60 слов)

The Impact of Modern Technology on Our Lives

People in contemporary world can hardly imagine their lives without machines. Every day either a new gadget is invented or an old one is improved. Different people appreciate new inventions differently. Some suppose that sophisticated gadgets are really useful and necessary, while others find them absolutely awful as they influence people badly. As for me, I am pretty sure that gadgets make people's lives easier.

Firstly, they do all kinds of dirty and hard work, as cleaning. Secondly, devices can save a lot of time as well as storage space. For instance, a computer disk can contain the same amount of information as several thick books. So, machines help people in different spheres.

However, opponents of this point of view are definitely sure that gadgets affect people negatively. People are reluctant to work due to the influence of machines. People become lazy and disorganized. They just expect their latest gadgets to do everything instead of them. Moreover, according to scientists, a great number of widespread devices produce radiation that can cause serious health problems. Furthermore, more and more people are becoming addicted to their modern gadgets, for instance computers, TVs or mobile phones. So, they neglect their home obligations, work or school and spend all their spare time in front of a laptop screen or a TV-set.

In conclusion I firmly believe that in spite of all drawbacks gadgets have their benefits. They save people's time and let them enjoy life.

3. Give Russian equivalents of the following words and word combinations:

contemporary world, new gadget is invented, invention, useful and necessary, influence people badly, storage, computer disk, affect people negatively, scientist, radiation, cause serious health problems, drawback, benefit, laptop screen.

4. Fill in the blanks with the following words:

easier, radiation, drawbacks, machines, people

1. Modern people cannot live without.... 2. Gadgets make our lives... 3. Some people think that gadgets affect ... negatively. 4. Scientists say that ... can cause serious health problems. 5. In spite of all... gadgets have their benefits.

5. Read the text and make up ten questions on the text.

Mobile phones

At present mobile phones have become very important in our everyday lives and the majority of people can hardly imagine themselves without cell phones. Is it just a tribute to fashion or a necessity of a modern person?

It isn't a secret that today many people feel quite helpless if they have left their mobile phones at home. First of all cell phones give us an opportunity to keep in touch with people in any place and in any time (it's especially important for businesspeople). Besides, modern mobile phones are multi-function: they provide access to the Internet, have various games, cameras, memory sticks, etc.

Nevertheless we can't deny that mobile phones provoke a range of problems. People have started to see each other less frequently. Mobile communication requires quite a lot of money and people have to control the amount of money on their accounts constantly otherwise at the most inappropriate moment they won't be able to phone the people they need. But the greatest disadvantage of cell phones is certainly their harmful influence on people's health.

In my opinion at the present time mobile phones are an integral part of life of any person and we can't stop it. I personally need it every day for my work and to keep in touch with my friends and relatives, though I'm aware of its deleterious influence on my health. But I try to avoid idle talks on the phone to reduce the influence of harmful radio waves. I try to find the happy mean.

Internet and Modern Life

The Internet has already entered our ordinary life. Everybody knows that the Internet is a global computer network, which embraces hundreds of millions of users all over the world and helps us to communicate with each other.

The history of Internet began in the United States in 1969. It was a military experiment, designed to help to survive during a nuclear war, when everything around might be polluted by radiation and it

would be dangerous to get out for any living being to get some information to anywhere. Information sent over the Internet takes the shortest and safest path available from one computer to another. Because of this, any two computers on the net will be able to stay in touch with each other as long as there is a single route between them. This technology was called packet switching.

Invention of modems, special devices allowing your computer to send the information through the telephone line, has opened doors to the Internet for millions of people.

Most of the Internet host computers are in the United States of America. It is clear that the accurate number of users can be counted fairly approximately, nobody knows exactly how many people use the Internet today, because there are hundreds of millions of users and their number is growing.

Nowadays the most popular Internet service is e-mail. Most of the people use the network only for sending and receiving e-mail messages. They can do it either they are at home or in the internet clubs or at work. Other popular services are available on the Internet too. It is reading news, available on some dedicated news servers, telnet, FTP servers, etc.

In many countries, the Internet could provide businessmen with a reliable, alternative to the expensive and unreliable telecommunications systems its own system of communications. Commercial users can communicate cheaply over the Internet with the rest of the world. When they send e-mail messages, they only have to pay for phone calls to their local service providers, not for international calls around the world, when you pay a good deal of money.

But saving money is only the first step and not the last one. There is a commercial use of this network and it is drastically increasing. Now you can work through the internet, gambling and playing through the net.

However, there are some problems. The most important problem is security. When you send an e-mail, your message can travel through many different networks and computers. The data is constantly being directed towards its destination by special computers called routers. Because of this, it is possible to get into any of the computers along the route, intercept and even change the data being sent over the Internet. But there are many encoding programs available. Notwith-standing, these programs are not perfect and can easily be cracked.

Another big and serious problem of the net is control. Yes, there is no effective control in theInternet, because a huge amount of information circulating through the net. It is like a tremendous library and market together. In the future, the situation might change, but now we have what we have. It could be expressed in two words— an anarchist's dream.

Electronic computers.

Electronic circuits work a thousand times more rapidly than nerve cells in the human brain. A problem that takes the human brain 2 years in order to solve it can be solved by a computer in one minute. The heart of the electronic computer is its transistors. In order to work a computer must have instructions; this is called "programming".

There are two main types of electronic computers: analogue and digital. In analogue computers problems are solved by analogy, the problems which analogue computers can solve are the following: mechanical forces, speeds, rotations, etc. Analogue computers are used for

investigation of mechanical processes, in general, they are used for scientific and engineering problems in which great accuracy is not required but answers accurate enough are required quickly.

In digital computers problems are solved by counting. They may be very large and powerful. All the data connected with the problem which must be solved are converted into electrical pulses by very fast electronic switches and these pulses are stored and counted. With modern electronic devices a single switching operation can take place in a few nanoseconds (a nanosecond is a thousand – millionth of a second).

What is a microprocessor?

A microprocessor is the central arithmetic and logic unit of a computer, together with its associated circuitry, scaled down so that it fits on a single silicon chip (sometimes several chips) holding tens of thousands of transistors, resistors and similar circuit element. A typical microprocessor chip measures half a centimeter on a side.

The task of the microprocessor is to receive data in the form of strings of binary digits (0's and 1's), to store the data for later processing, to perform arithmetic and logic operations on the data according to the previously stored instructions and to deliver the results to the user through an output mechanism such as an electric typewriter, a cathode – ray – tube display or a two – dimensional plotter. A typical microprocessor would consist of the following units: a decode and control unit (to interpret instructions from the stored program), the arithmetic and logic unit, or ALU (to perform arithmetic and logic operations), registers (to serve as an easily accessible memory for data which are frequently manipulated), an accumulator (a special register closely associated with the ALU), address buffers (to supply the control memory with the address from which to take the next instruction) and input/output buffers (to read instructions or data into the microprocessor or to send them out).

Computer programming.

Programming is the process of preparing a set of coded instruction which, when executed by a digital computer, yield the solution of a specific problem or perform specific functions. Each computer and each programming language has its own unique repertoire, method of operation, etc. These should be studied and understood before preparing a program on a specific language for execution by a specific computer.

A computer has the ability to automatically execute a program stored within itself. During execution of the program, the computer performs various digital operations (adding two numbers, moving data in and out of storage, reading in or printing out data, etc.) If the stored program is changed, the actions of the computer change. Thus, the computer actions depend on both the configuration of the computer hardware (the physical computer equipment) and the software (the programs stored within the computer).

A given computer capability can be provided either by hardware alone or by a combination of hardware and software. The choice of a given mixture of hardware and software depends on factors such as cost, speed, ease of maintenance, and flexibility.

There are three nominal levels of programming language: machine language, assembler language, and compiler language.

Machine Language.

In the machine – language programming level, the programmer writes the program exactly as stored in the computer. Very little programming is done at this level as it is extremely tedious, and when errors are found it is hard to correct them.

The machine – language level is useful in the initial operation of a computer when no other techniques are available, in repair of a faulty computer, and in the debugging of programs when other techniques fail and the program must be examined at the machine – language level.

Speaker A

I live in the country but I've always wanted to move to a big city. I think that there are more career opportunities there, more jobs, people can get a better education and better medical services there. There is more entertainment in the city, too. You can go to theatres, cinemas and clubs, there are lots of people everywhere – you'll never get bored. I'll move to the city as soon as I get an opportunity to do so.

Speaker B

I live in a big city, in a new fast-developing area. Most of the buildings were built not long ago, so the area has a modern look and is comfortable to live in. There are shops, cinemas, schools, hospitals, sports centres and parks within easy reach of my house. Right in front of my house there's a bus stop, so I have no problem getting to the centre or any other part of the city.

Speaker C

We've just moved house and now I live in a new modern building in the centre of the city. My window has a view of a busy street but the interior creates a nice and peaceful atmosphere. The walls are painted light green and the furniture is in warm brown and creamy colours. There's a plasma TV and a portable audio centre. I like drawing and there are several of my pictures on the walls. I think they look nice there.

Speaker D

Everybody wants their home to be a safe, nice and comfortable place but their ideas of comfort and beauty are very different. In hot climates people sometimes make their homes underground. Living underground, however, doesn't mean living in dark, dirty and damp caves. Modern underground homes are light. They are beautifully designed, nicely furnished and very comfortable to live in.

Speaker E

When we were walking along the main street, the guide pointed to an ordinary looking house and said that the place had a history. During the war a famous doctor lived there. He arranged a hospital in his own home and saved lots of people. Now nobody lives in the house, there's a museum of science and medicine there. The museum has very interesting exhibits on the history of medical science.

During the educational process we learn different subjects and get different skills. It will help us in our future life to get interesting well-paid job and we want. But as usual there is always a

foreign language in every educational curriculum. So why do we need foreign languages for? The answer is rather simple. There are for about 6 billions of people on our planet and all of them speak a great number of languages. Most popular of them are very necessary for every person in modern life. The reason is simple – to understand people from others countries and make communication with them easier. It is very important because people don't live separately from each other. But it isn't enough to know only popular languages. People also need to study ancient languages. Why? Because they are maternal to modern languages and learning them help us to understand modern languages better.

Задание 1. Прочитайте текст об экстремальных видах спорта. Установите соответствие между вопросами А-Д и пронумерованными абзацами текста 1-3. Используйте каждую букву только один раз.

- A. Extreme sports become increasingly popular because of punk culture and fashion.
- B. Many sports demonstrate daring tricks and are connected with special culture.
- C. Snowboarding was introduced into Olympics due to X Games.
- D. A winter extreme sport requires a specially designed board.

1. Developed in the 1960s, snowboarding is believed to have originated in the US, where several inventors explored the idea of surfing on the snow. The sport quickly developed, and the early boards were replaced by designs that are specialized to meet the demands of different competitions. The basic design is a board to which the rider's feet are attached with bindings. The size and shape of a board varies according to its use and the size of the snowboarder.

2. The term extreme sports is generally attributed to the X Games, a made-for-television sports festival created by the cable network ESPN in 1995. The success of the X Games raised the profile of these sports. The extreme sports of mountain biking and snowboarding debuted at the Summer and Winter Olympic Games in 1996 and 1998, respectively.

3. The primary extreme sports - skateboarding, in-line roller-skating, and BMX, for example - often use half-pipes and urban landscapes to perform a wide range of tricks. The sports also share a unique subculture that separates them from traditional team sports. This youth-oriented culture embraces punk music and fashion and emphasizes individual creativity.

Christmas Presents

Christmas is a particularly difficult time of year - bad music playing in all shops, screaming children blocking pavements, demanding that they get the latest, greatest plastic toy, and relatives hugging children and crying out "Oh, my, haven't you grown!" And so, in order to make it all easier, we have a tradition of giving presents to each other, as a way of showing our love. But unfortunately, this too is not easy - what if you have no taste, what if you have no money, or what if you just can't be bothered? So here's the guide as to the Do's and Don't's of giving presents at Christmas.

Cash is a great gift: people can get themselves whatever they want and you don't have to put hours of effort into buying the perfect gift only to find that it's not appreciated.

Fashionable or designer clothes are always good but, for crying out loud, make sure you get the right size and you know the person's fashion sense.

Chocolate usually goes down well, although you might want to make sure that everyone else doesn't have the same thought: a person could end up with enough chocolate at Christmas to open a little shop.

A CD or DVD makes a great pressie, although you'd have to make sure that the person doesn't have it already and, most importantly, will like the genre that you bought.

Jewelry usually goes down well with most females, although it's safer to stick to something simple unless you know exactly what the person would appreciate.

If you are loaded, a palmtop or laptop would be appreciated by anyone, especially with all the latest features, a modem and, most importantly, a good collection of games.

Don't bother giving anyone something you'd like to receive yourself because you'll only feel disappointed if they don't seem to share your interests and don't appreciate your thought.

Задание 7. Прочитайте текст и выполните задание к нему

Conductors and Insulators

Conductors are materials having a low resistance so that current easily passes through them. The lower the resistance of the material, the more current can pass through it.

The most common conductors are metals. Silver and copper are the best of them. The advantage of copper is that it is much cheaper than silver. Thus copper is widely used to produce wire conductors. One of the common functions of wire conductors is to connect a voltage source to a load resistance. Since copper wire conductors have a very low resistance a minimum voltage drop is produced in them. Thus, all of the applied voltage can produce current in the load resistance.

It should be taken into consideration that most materials change the value of resistance when their temperature changes.

Metals increase their resistance when the temperature increases while carbon decreases its resistance when the temperature increases.

Thus metals have a positive temperature coefficient of resistance while carbon has a negative temperature coefficient. The smaller is the temperature coefficient or the less the change of resistance with the change of temperature, the more perfect is the resistance material.

Materials having a very high resistance are called insulators. Current passes through insulators with great difficulty.

The most common insulators are air, paper, rubber, plastics. Any insulator can conduct current when a high enough voltage is applied to it. Currents of great value must be applied to insulators in order to make them conduct. The higher the resistance of an insulator, the greater the applied voltage must be.

When an insulator is connected to a voltage source, it stores electric charge and a potential is produced on the insulator. Thus, insulators have the two main functions:

1. To isolate conducting wires and thus to prevent a short between them and
2. To store electric charge when a voltage source is applied.
